

# Fire Protection Hydraulic Control Valves

F-30 Diaphragm Valves | PN16

# FIRE PROTECTION DIAPHRAGM VALVES [ PN16 ]

# F-30 Series

#### Accurate, Rapid, Reliable and Quiet

The F-30 Series is line of metal, diaphragm-operated hydraulic control valves.

The valves are suitable for installation for fire protection in highrise buildings and in on & off shore applications.

The F-30 series has an innovative elliptic shaped diaphragm that integrates well with a wide variety of regulating control pilots, solenoids and control accessories.

It is compatibility designed for water level control, flow control, electric & remote control as well as pressure reducing & pressure sustaining operation.

Excellent regulating capabilities for a wide range of flow rates from drip (500 l/h) up to maximum flow

Operational from low pressure up to 16 bar

Highly reliable operation and durable over time

Quick-reaction operation

Rapid response to changes in flow rate

Designed to reduce cavitation damage

Low head losses

Wide range of connections:
Flanged, Threaded and Grooved

Simple mechanism

Easy inline maintenance

User-friendly

# About A.R.I.

High KV performance

A.R.I. is a leading manufacturer and provider of solutions for the protection and control of liquid transmission systems.

The company manufactures and markets its world renowned comprehensive line of air valves, check valves, and unmeasured flow reducers as well as exceptional performance hydraulic control valves. A.R.I. is known throughout the world for its expertise, service and uncompromising quality – A.R.I. Redefining Reliability

**Control Valve Applications** 

## F-30 R

#### **Pressure Reducing Valve**

Maintains a constant downstream pressure regardless of upstream pressure or flow rate fluctuations. The set point of reduced pressure is adjustable by a 2-way or 3-way pilot valve.

A dry chamber, spring-loaded diaphragm inside the pilot reacts according to the downstream pressure changes. The pressure fluctuations are compensated by gradual opening and closing of the valve.

#### F-30 T5M

#### Manual On-Off Deluge Valve

Deluge Valves open and close manually by means of a 3-way hydraulic selector.

## F-30 T5E

#### **Electric Control Deluge Valve**

The electric Deluge Valves are used for remote commands by solenoids in a normally opened or closed position and can operate in combination with all the hydraulic pilot applications.

### F-30 T6E

#### Electric Control Deluge Valve (EExcd application)

The electric Deluge Valves are used for remote commands by explosion-proof solenoids in a normally opened or closed position, and can operate in combination with all the hydraulic pilot applications.

# F-30 Q

#### Quick Reacting Pressure Relief Valve

The valve opens quickly to high pressure readings, but closes slowly to protect the system against excessive pressure.

# **Control Pilot Valves**

The A.R.I. series of control pilots offers a variety of pressure and flow regulating control pilots, suitable for working pressures from 0.3 bar to 16 bar. This wide range of pilots is suitable for two and three-way control circuits, either in metal or reinforced nylon. The A.R.I. series of control pilots are outstanding in their innovation, accuracy, reliability and simplicity.
