- Central control and change of set-points of installed units
- Easy change between cultures by use of your own stored plant recipes
- Report generator for documentation and analyzing of growth conditions
- Quick and easy export of data for your own or consultant's use
- Central collection of data from climate controls, irrigation and fertilizer mixers from all departments
- Your own naming of eg. heating valves, windows, screens etc.
- Possible to add set-points to a favorites list

Optimise the use of resources and get the best growth conditions

SuperLink 6 is an advanced PC program with a graphic user interface, and it is easy to set-up. It provides an easy and reliable control of all climate controls and fertilizer mixers from Senmatic, and it gives you the full overview by data collection and reuse of data. The program offers many new facilities and options for collection of climate and fertilizer data.

Central control

SuperLink 6 makes it easy and fast to read and adjust the conditions in various departments, as all information can be shown in and controlled directly from a central computer in the company. SuperLink 6 guarantees the best possible utilization of our advanced equipment for controlling climate, irrigation and fertilization.

SPECIFICATIONS / SUPERLINK 6

PC

Units compatible with SuperLink 6

- LCC2 touch + LCC4
- LCC Completa Climate Controls
- LCC900 Climate Controls
- LCC1200 Climate Controls
- EMA Completa Climate Controls
- LCC900 Boiler Room
- AMI Penta Fertilizer Mixer
- AMI Completa Fertilizer Mixer
- AMI Quattro Fertilizer Mixer
- AMI900 Fertilizer Mixer
- VA900

SuperLink 6 further functions

- Available with 1 - 64 compartments
- Table with content free of choice
- Historical graph
- Free choice of graphic curve (profiles)
- Change compartment name
- Fast navigation between compartments
- Available in more languages
- Windows based
- Communication with Info Grow

Interface / communication module

IF40 - ARCNET - For Completa / 900-serie
--

PVI - ETHERNET - for LCC2 / LCC4 / Penta
--

When is the interface used?

IF40 (item no. 306201):

Used when purchasing SuperLink for a mixed system with various older products, such as Completa or LCC900. The communication is Arcnet. If one already has an SL, and just updates, it should not be included.

PVI-dongle (item no. 306216):

Used when purchasing SuperLink for AMI Penta, LCC2 and LCC4. The communication is Ethernet.

IF40 and PVI dongle are both used when:

one buys SuperLink to run on products with a combination of both Arcnet and Ethernet system.

Which SuperLink versions can be updated for the SL6?

The SL6 is a Windows 32-bit system and as the SL4 and SL5 run on the same system, they can both be updated to SL6.

SL2 runs on DOS 16-bit and SL3 runs on Windows 16-bit, and therefore neither of the two previous versions can be updated to SL6.
